Improving Member Experience Through Support Analytics

Operational Insights on Support Drivers and Member Retention

WHOOP ANALYTICS CASE STUDY

Prepared by: **Jitin Nambiar**

Snowflake | SQL | Power BI | Python

Business Context

Project Objective

Understand how support interactions impact member experience and retention to identify operational improvements.

Key Questions

- What are the primary drivers of support tickets?
- Which issues cause repeat contacts and escalations?
- How does support experience impact member churn?
- What operational improvements can reduce support demand?

Dataset Overview

METRIC	VALUE / DETAILS
Total Members	200k+
Support Tickets	10,000
Churn Rate	11.4%
Membership Plans	Trial, One, Peak, Life

Support Performance Overview

Operational Health & Efficiency Metrics

AVG CSAT
4.40 / 5.0

FIRST CONTACT RESOLUTION
82.9%

REPEAT CONTACT RATE
17.1%

ESCALATION RATE
20.8%

AVG RESOLUTION TIME
30.2 hrs

DASHBOARD SOURCE: EXECUTIVE HEALTH BOARD

Major Support Drivers

Analysis of Ticket Volume by Issue Category

TOP DRIVERS BY VOLUME

1	**Battery Drain**	Device Hardware	~2,000 TICKETS
2	**Sync Issues**	Connectivity	~1,800 TICKETS
3	**Billing**	Account	~1,500 TICKETS
4	**App Bugs**	Software	~1,500 TICKETS

Strategic Insight

Technical reliability (device & software) accounts for the majority of support demand. Battery and connectivity issues alone represent ~38% of total volume, indicating a need for product-level interventions rather than just support process changes.

Root Cause Analysis

Operational Pain Points & Complexity Assessment

Focus Area: Operational Inefficiency

ISSUE CATEGORY	REPEAT RATE	ESCALATION RATE	AVG RESOLUTION TIME
App Bugs Software Defect	25.6%	28.1%	42 hrs
Sync Issues Connectivity	23.4%	27.7%	38 hrs
Battery Drain Hardware / Firmware	16.6%	30.2%	50 hrs

Complexity Analysis

Battery Drain has the highest escalation rate (30%) and longest resolution time (50hrs), indicating it is the most complex issue for support agents to diagnose and resolve, often requiring Tier 2/3 intervention.

Interpretation

These issues are difficult to resolve during the first interaction and frequently require escalation.

They likely require **engineering and product fixes** rather than support process changes.

Impact on Member Retention

Correlation Analysis: Support Experience vs. Member Churn

OVERALL CHURN RATE

11.4%

Trial members exhibit the highest churn risk **(22.7%)** among all plan types.

Members with **multiple repeat contacts** show significantly higher probability of cancellation.

Resolution times **above 48 hours** correlate with the highest churn rates.

Operational Priorities

Focus Areas Based on Impact & Performance

HIGHEST IMPACT ISSUES

Battery Drain
CRITICAL

Highest volume driver (~2k tickets) with the longest resolution time (50 hrs).

App Bugs
CRITICAL

Drives highest repeat contact rate (25.6%), causing significant member frustration.

Sync Issues
HIGH

High volume (~1.8k tickets) combined with a high escalation rate.

PERFORMING WELL / LOW IMPACT

Onboarding
STABLE

Fastest resolution time (~10 hrs). Current self-service tools are effective.

Shipping
STABLE

Low repeat rate and manageable volume. Logistics partners performing to SLA.

STRATEGIC IMPLICATION

Shift Resources: Direct engineering and tier-2 support focus towards **Reliability (Battery/Sync)** and **App Stability**.

Maintain current efficient processes for Onboarding & Shipping without additional investment.

Estimated Impact Scenario

Projected Outcomes of Reducing Repeat Contacts

Model: Efficiency Gain

Target Scenario

REPEAT CONTACT RATE

Current **17%** → Target **12%**

MODEL ASSUMPTIONS

- Based on current volume of **10,000** tickets per period
- Avg **1 extra contact** per repeat issue
- Average Handle Time (AHT) of **15–30 mins**
- Operational cost estimated at **$25/hour**

Ticket Volume Reduction

-500

Reduction in repeat tickets (1,700 → 1,200), representing a **~29% drop** in unnecessary volume.

Agent Time Saved

250 hrs

Estimated hours freed up for agents to focus on complex, high-value interactions. (Assuming ~30 minutes average handle time per repeat ticket.)

OpEx Savings

~$6.3k

Direct labor cost savings per period based on reduced handle time and volume.

Retention Lift

+0.8%

Projected improvement in churn rate based on correlation between repeat contacts and member exit.

Recommended Actions

Strategic Roadmap for Service Improvement & Retention

Action Plan

01 Improve Device Reliability

THE ISSUE

Battery and connectivity issues represent ~38% of total volume and have the highest resolution complexity.

Recommendation: Initiate an engineering task force focused on firmware stability and hardware quality assurance. Reducing these defects tackles the root cause of the most expensive support tickets.

02 Accelerate App Bug Resolution

THE ISSUE

App bugs drive the highest repeat contact rate (~26%), frustrating members who encounter recurring errors.

Recommendation: Introduce enhanced in-app diagnostic logging for faster troubleshooting. Align support feedback loops with product teams to shorten the bug-fix release cycle.

Recommended Actions

Strategic Roadmap for Service Improvement & Retention

Action Plan

03 Reduce Resolution Time

THE ISSUE

Tickets open longer than 48 hours strongly correlate with increased member churn risk.

Recommendation: Implement automated escalation rules for tickets aging past 24 hours. Create a specialized "Rapid Response" tier-2 team to handle complex technical cases swiftly.

04 Enhance Trial Onboarding

THE ISSUE

Trial members exhibit the highest churn rate (22.7%), often due to early friction in setup.

Recommendation: Proactively guide trial users through setup via in-app tutorials and automated check-in emails during the first 7 days to ensure successful device pairing and value realization.

Strategic Impact

Expected Business Value & Long-Term Benefits

Executive Summary

Higher CSAT & NPS

Improving resolution speed and reducing repeat contacts directly elevates member satisfaction scores.

Reduced Support Costs

Lowering repeat contact rate decreases overall ticket volume and operational cost per member.

Increased Retention

Proactive onboarding and faster fixes reduce churn risk, particularly among trial and early-tenure members.

Stronger Feedback Loop

Integrating support analytics with engineering accelerates product improvements and bug fixes.

Questions & Discussion

Let's discuss how we can implement these recommendations to drive immediate impact.

Goal: Improve Experience

Goal: Retain Members
